Alternative Therapy for Injury Series: Acupuncture

Understanding where our pharmaceuticals come from may lead to more effective medicines.

Article by Amy Greeson, RPh

Healing and curing disease has been a vital part of every culture on our planet as long as man has been around. In the United States, our medications come from laboratories and through pharmacies, doctors, and hospitals.

Yet, the majority of cultures in the world must rely on their own traditional remedies and treatments. These treatments have been passed on from generation to generation, and have been used for hundreds, and often thousands of years. These indigenous cultures treat disease and injury through spiritual healings, plants, herbs, and other natural substances.

In fact, it is because of their knowledge of these plants and natural resources that researchers and scientists have been able to develop a large number of our modern pharmaceuticals.

Approximately 55% percent of our pharmaceuticals in the United States have come from, been

<< Continued on page on page 4 >>
